

Create a Model

Task

Generate a model called User.

The User should have the following fields:

- first_name
- last_name
- age
- profile (text field)
- timestamps

Add a full name method to the User model that returns the user's name in the format: "last_name, first_name"

Things to Know

- rails generate model --help
- Migration DSL
 - Checkout the cheat sheet!
- Run rake db:migrate!
 - rake db:drop to undo (not that you'll need it)
- ActiveRecord query language
 - Checkout the cheat sheet!
